Sir :
enclosed please find your returned check for reasons you'll understand ... it so happens I'm in the middle of writing a 'final' book 'The Shots in Dealey Plaza: Evidence of Conspiracy' and this plan, enclosed extra print for you, is the base plat on which all crossfires will be placed ...I have traced the missed shots and a lot of those which some people say 'hit' .. with Penn Jones last spring I photographed and have included in my test the bullet scar on the Elm Street sidewalk 33 feet north of the second lampost and four feet in from the curb .. direct evidence of a rifle across the plaza .. had the right turn off Main onto Houston not been made the two grassy knoll rifles would ahve done the job easily ... I woul dappreciate your sending me a copy of the photo you sent Dick with a rifle on the grassy knoll south... my only way to place this is to take the scar's angle and draw it back across the open space .. not a very accurate system but better than nothing ...it comes out in the corner of the fence ... it's interesteing to see Shaneyfelt I think it's 33 or so which looks that way in May '64 and there is no fence .. there sure is one now (last spring) and on Nov 23, 1963 Squire Haskins' aerial shot of the Plaza shows it clearly ... wouldn't it be possible for t he preist to have said left and meant right ..there is evidence in Z-314 of an exiting mass from JFK's right temple area .. actually higher up .. so hold your money until, the book is printed .. thanks anyway cheerio
